ABOUT US

We are committed to these four pillars which guide our actions:

INNOVATION **DESIGN** **SERVICE** **QUALITY**

We aim to design and manufacture petroleum equipment and logistics for fuel transport and cargo in general. We have state-of-the-art machinery and materials which allow us to comply with the highest quality levels and innovative designs. In addition, we are exclusive traders from Jialong and Civacon in Argentina.

VISION

To consolidate ourselves to play a major role in the metallurgical industry, as an example of innovation and quality, thus positioning our units among fuel transport companies associated with the main oil companies in the country.

PILLARS

We have highly qualified staff. We encourage our team to propose bold ideas and we urge them to make them come true.

ABILITES

We develop products with the strength, safety, and reliability that our customers claim and need in an increasingly demanding market.

ENGINEERING AND PRODUCTION:
Our units are customized based on every customer's specific needs, keeping their quality standard, and complying with current legal requirements, within reglementary and normative frameworks.

TRAINED STAFF AND TECHNOLOGY:
We have a highly qualified team and state-of-the-art technology in all our production processes, including checkpoints during all the stages of the production process.

HIGH QUALITY RAW MATERIAL:
Each unit is supported by the best supplies in the national and international market.

AFTER-SALES SERVICE:
We guarantee that our customers will have an immediate response in case of any inconvenience, offering counselling/-technical support as well as a full spare parts stock.

OUR PRODUCTS

MOUNTED ON TRUCK

Ideal for oil transport in tight spaces or with driving limitations.

This unit is aimed at dispatching oil at petrol Service stations in big cities, and directly dispatch to customers and agricultural markets.

- MODEL MC.18.3 TANK WITH CAPACITY FOR 18.000 LITERS
  Divided into (03) internal tanks, this model has a bottom loading system.

- MODEL MC.18.3-LC
  It has the same qualities as the previous model but additionally it has an integrated flowmeter Liquid Control that enables oil dispatch through a pump at a downloading distance of up to 50 meters from location.

OUR PRODUCTS

SEMITRAILERS

Our semitrailers tanks mounted on self-supporting chassis are designed, manufactured, and tested to satisfy the need to transport big quantities of products in the same journey safely and efficiently.

- MODEL SR.46.7 TANK WITH CAPACITY OF 46.000 L. Divided into seven (07) internal tanks, with three fixed (03) tandem axles configuration, developed with bottom loading system. This model can be built with valves or bar box.

- MODEL SR.50.3 TANK WITH CAPACITY FOR 50.000 L. Divided into three (03) internal tanks or mono tanks, with 1+1+1 axle configuration with one directional axle and two fixed axles developed with bottom loading

INNOVATION

WE HAVE MANUFACTURED THE FIRST 50.000 LITERS TANK IN ARGENTINA.

Unique case in the country that has an axes configuration which has been recently approved in Argentina, known as 1+1+1.

It is divided into 3 compartments of 20.000/5.000/ 25.000 liters. It has been produced in aluminum alloy abiding by the laws (Economic European Community law, for transport of hazardous substances on the road).

It has a modern design, which is also equipped with a Vapor Recovery system, which can encapsulate gases coming from the interior of the unit during the loading process, thus avoiding polluting the environment.

WEIGHT EVEN DISTRIBUTION

26% GREATER LOAD-BEARING CAPACITY

ALUMINUM ALLOY

ASME CERTIFICATION

Our plant is certified by ASME (American Society of Mechanical Engineers), which plays a major role to guarantee the safety of the public and in the standardization of elements.

It is a great support for global commerce since it offers reliability in our products.

NEW TECHNICAL SUPPORT WORKSHOP
YPF CERTIFICATION

We have incorporated a new production workshop of 6.600 square meters, which will allow to expand and speed up production with the aim of being at the forefront of our effort to expand the market after having been certified by YPF, who has verified that our products comply with the highest quality standards and guarantee optimum service, as a result of great work, in which we have incorporated new models which have been customized in accordance with our customers' needs, abiding by all current legal requirements, and reglementary and normative laws.

PROJECTION

Our main aim is to double our monthly units' manufacturing capacity by including a second production line in the plant.

FAS
FUEL AUTOMATION STATION

New equipment which offers a great improvemnt in oil supply operations.

- It has 28 hoses which allow it to supply fuel to multiple units simultaneously.
- Its automated maintenance and filling technology guarantees the continuous functioning of operations.
- Its operating System stores the collected data in the cloud.
- Autonomous internal command center, with controlled climate, which avoids risks during fuel supply.
- It eliminates the atmospheric fuel spray, which guarantees the protection of the environment.
- Continuous protection against spills and leaks.

MONITORING

Tank measurement in real time.

OPERATING SYSTEM

It stores collected data in the cloud, and you can have access to it from any device.

PERMANENT PROTECTION

Protective sleeve hoses to prevent breakage, spills, and leaks.
